

Radar Integrated Multiple PTZ Tracking

Ventionex's Simplify software combines radar technology with multiple PTZ cameras, creating an advanced surveillance solution. When radar detects an object of interest crossing into intrusion zone, Simplify instantly activates the PTZ cameras to continuously track and keep a close eye on it. This means that whether it's monitoring an offshore platform, marine vessel, sea or land border, Simplify ensures comprehensive coverage and quick response to any potential security concerns. It's like having a virtual security team that works tirelessly to keep your environment safe and secure.

Customizable Workflows

Simplify offers flexible workflows tailored to specific security needs. These workflows automate tasks, streamline processes, and ensure efficient handling of security incidents.

Integration with Radar

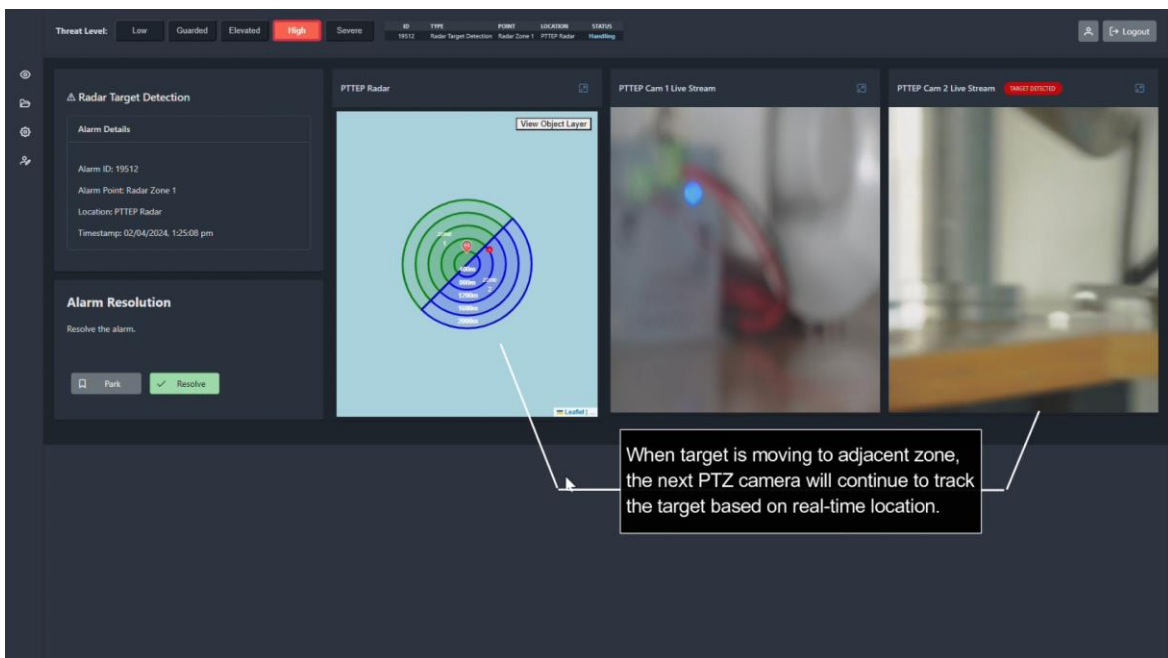

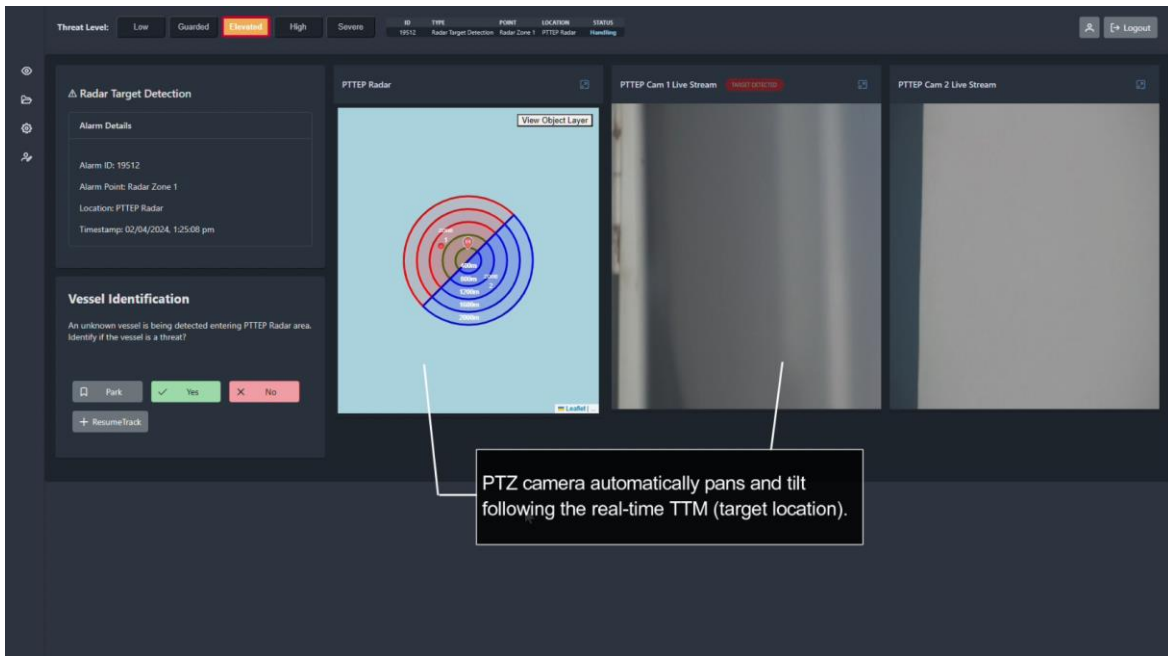

Simplify integrates with radar technology for real-time detection and tracking of targets with multiple PTZ cameras. This function provides initial detection and situational awareness, alerting security personnel to potential threats across a wide area.

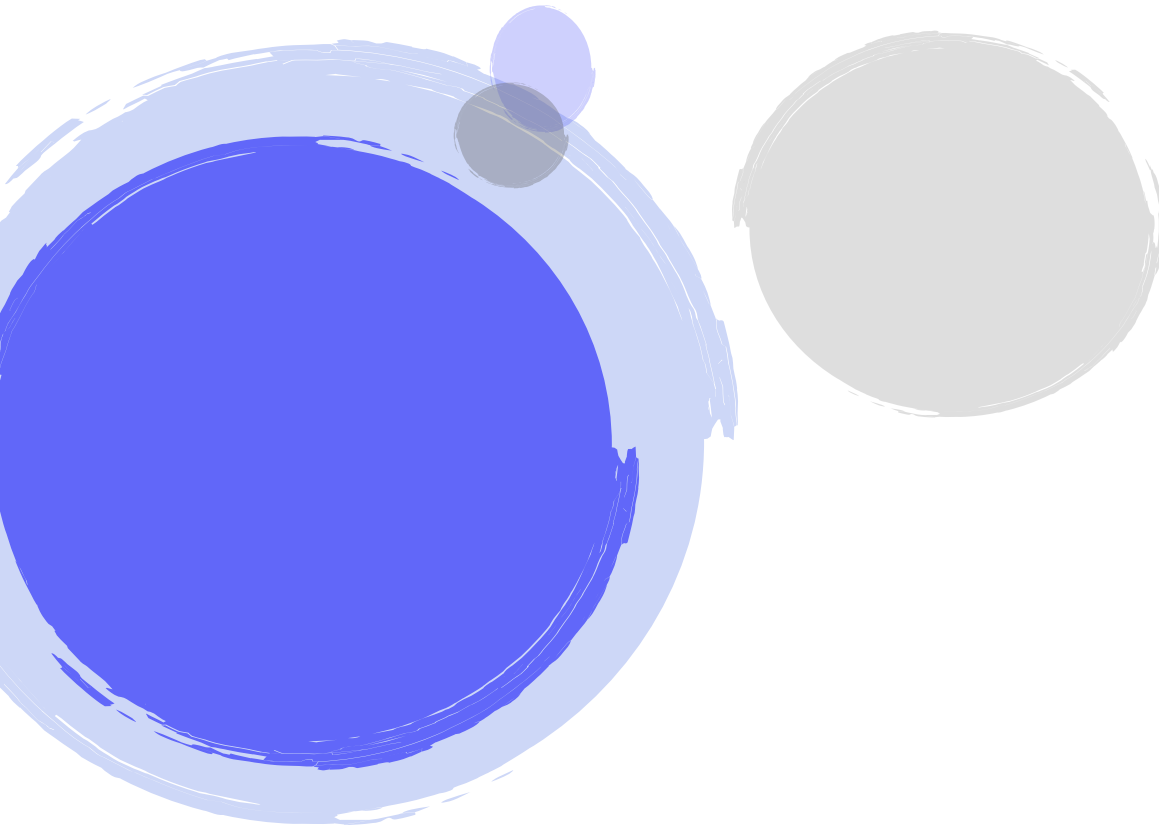

Integration with Multiple PTZ Camera Automation

Multiple PTZ cameras can be implemented to cover different intrusion zones, with automatic handover when the intruder vessel/object moves to different zone.
