

Unified Intelligent Platform

Organizational threats and risks are growing and changing all the time. Your business reality means managing these increasing risks with fewer resources.

Legacy Security System

System Growth

- More systems mean additional management software
- Access control, CCTV, intruder alarm systems and etc have **individual** management software

System Inflexibility

- Systems become **inflexible**, and need more resources to manage
- Abundance of **information silos**

Vulnerable Organization

- Organization becomes vulnerable when faced with a major incident
- A cohesive **command and control** system cannot be executed

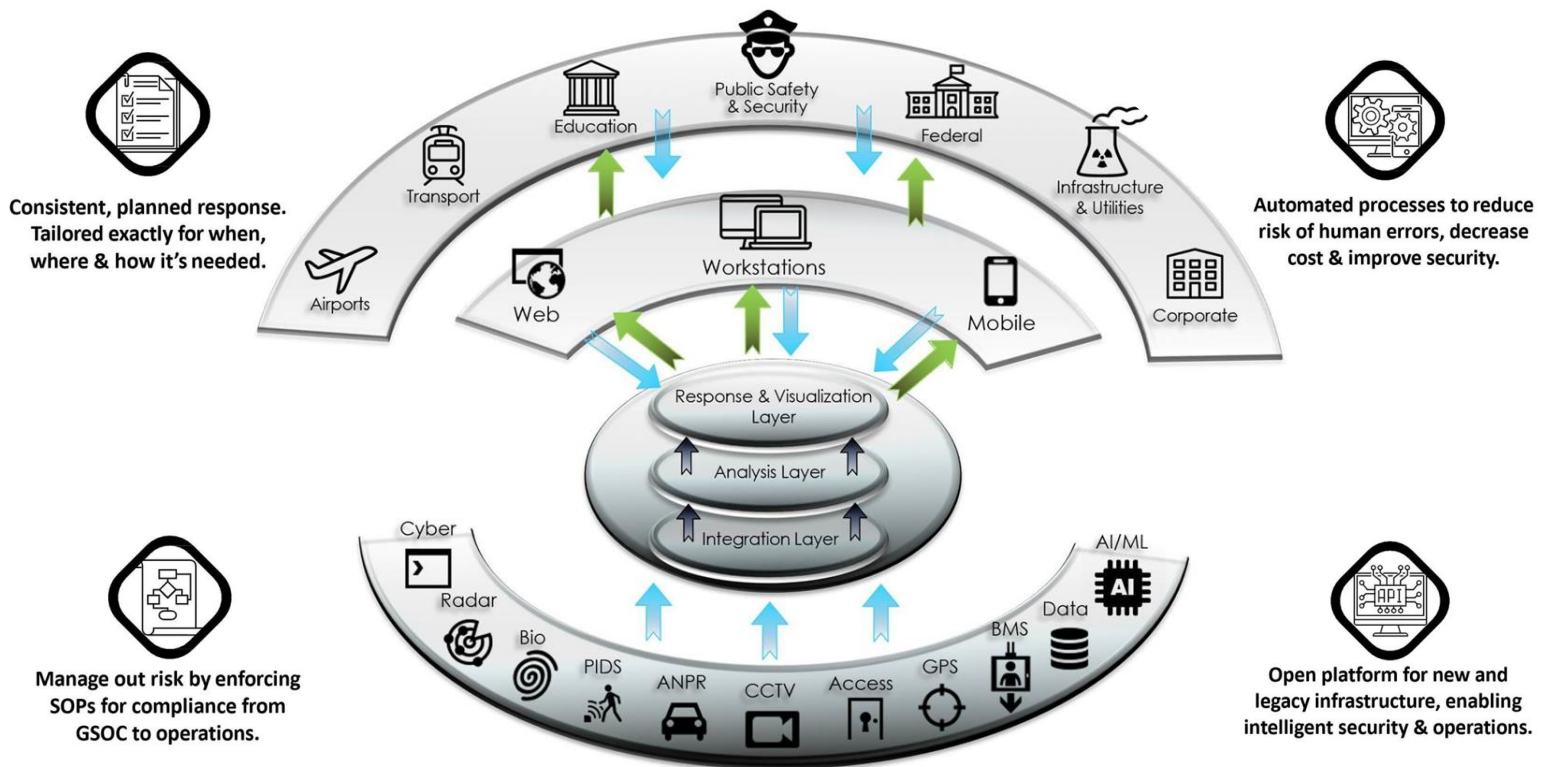

Today, more than ever, your ability to deliver relies heavily on the quality, integration and flexibility of your technology.

In short, with a legacy security system, your ability to plan, perform, measure and report in an integrated and proactive way, go unsupported.

“
It’s time to
revolutionize your
security & control
”

Our solution

Unified Intelligent Platform is a middleware software that provides a platform and applications, designed to **integrate multiple unconnected security applications** and devices and control them through **one comprehensive user interface**.

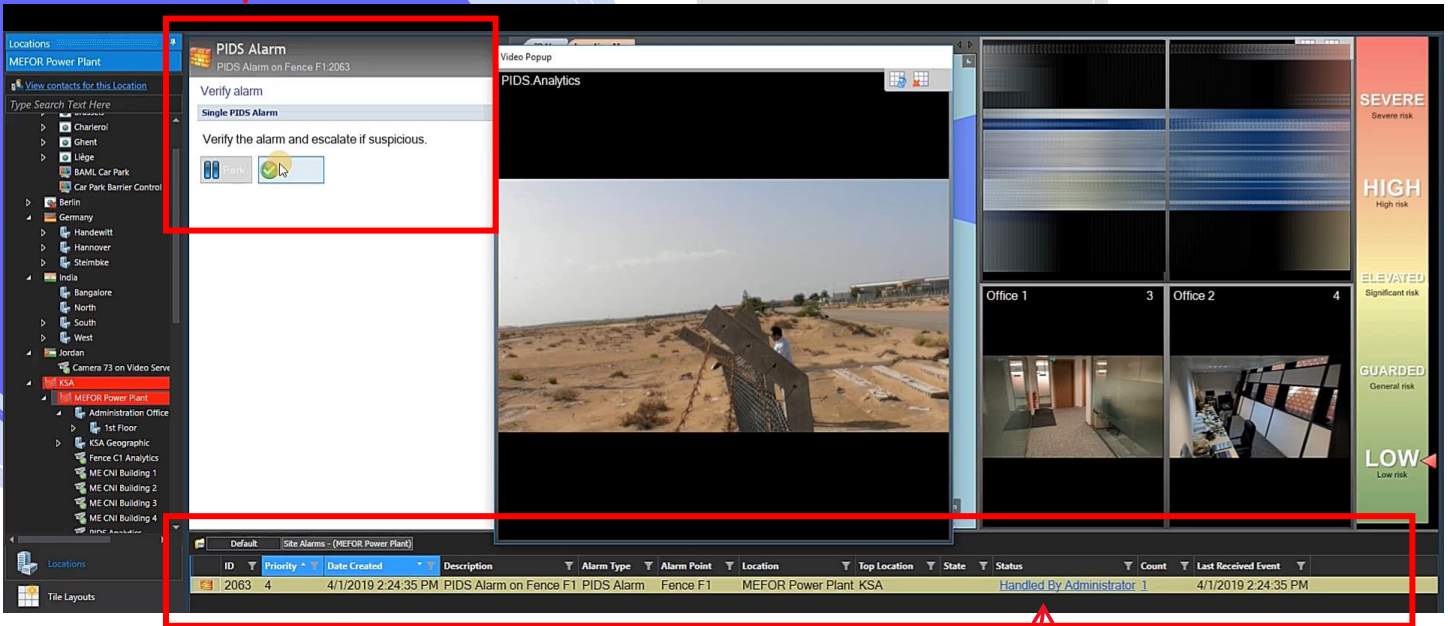

It collects and correlates events from existing disparate security devices and information systems to empower personnel to identify and **proactively resolve situations**.

Raise Situational Awareness

Provides operators with real-time Situational Awareness through standard operating procedures (SOP) with step-by-step **process guidance**, ensuring alarms/threats are managed effectively and efficiently.

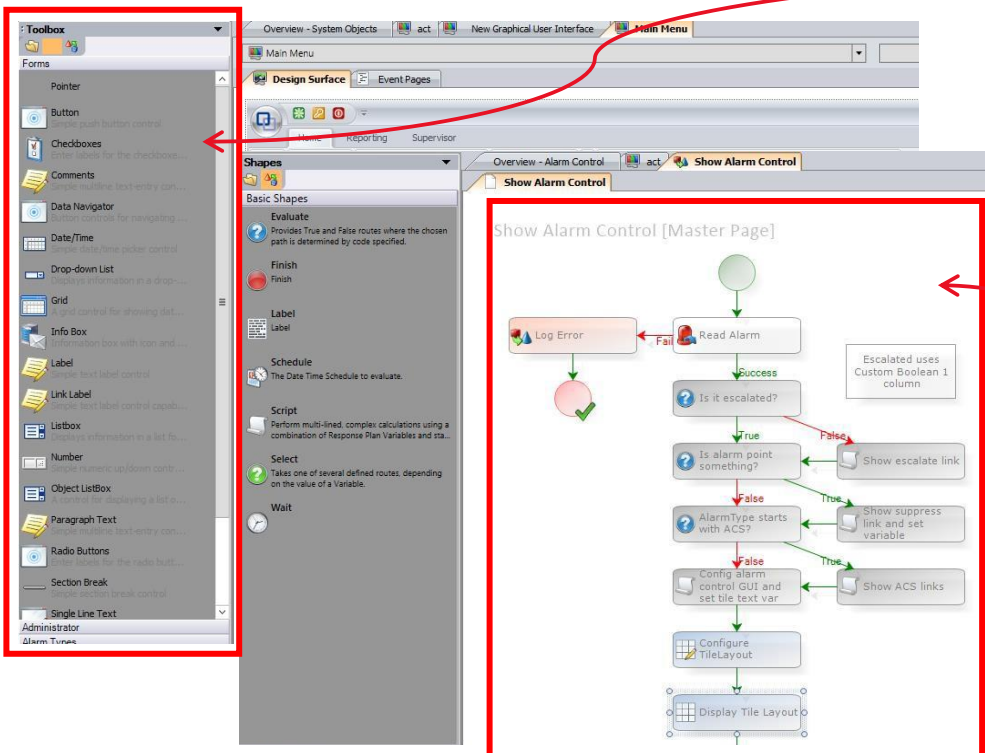

Alarm Handling

The **alarm stack** UI shows a prioritized list of active alarms to be handled by operator

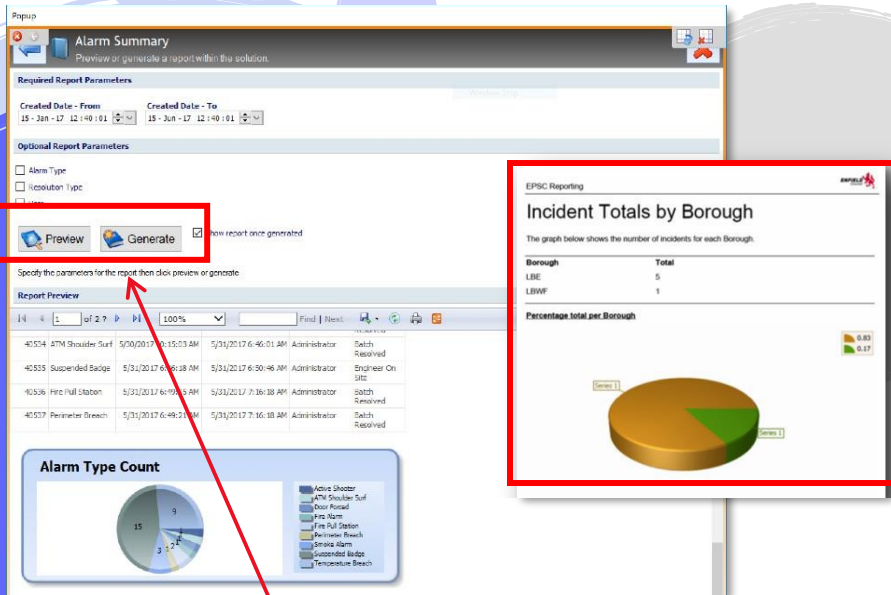

GUI Designer

Allows any part of the interface to be **customized** using the inbuilt GUI designer without writing or compiling any code.

Workflow and Process Guidance Designer

Visual Response Plan (VRP) Designer allows the **creation of Alarm Handling SOP** by using visual flowchart-based drag and drop design surface.

Auditable and Automated

Complete visibility, audit trail & trend analysis of the entire operation.

Easy Reporting for IT

Open database provides information to 3rd party applications. Adoption time for IT personnel is minimized through the use of standard IT reporting tools.

Future-Proof

Removes the dependencies on individual device or system thus enables the seamless integration of new technologies.

Economic Efficiencies

By leveraging existing as well as new technologies, this will allow you make full use of the existing securities infrastructure whilst providing the freedom to gradually phase to newer technologies over time.

Video Wall

Video wall deployments provide the ability to select the videowall layouts and change the content in each area using a drag and drop interface.

Resilience

The system is designed to seamlessly integrate with organization-wide IT disaster recovery, business continuity and back-up policies.
